1918108 – STATISTICS FOR MANAGEMENT

Regulation – 2019

Academic Year – 2022 - 2023

Prepared by

Dr. T.Isaiyarasi , Assistant Professor / Mathematics Ms.V.Nagarani, Assistant Professor / Mathematics

SRM VALLIAMMAI ENGNIEERING COLLEGE

(An Autonomous Institution) SRM Nagar, Kattankulathur – 603203.

DEPARTMENT OF MATHEMATICS

SUBJECT : 1918108 – STATISTICS FOR MANAGEMENT SEM / YEAR: I / I Year M.B.A.

UNIT I - INTRODUCTION: Basic definitions and rules for probability, conditional probability independence of events, Bayes' theorem, and random variables, Probability distributions: Binomial, Poisson, Uniform and Normal distributions.

Q.No.	Question							BT Level	Competence		
	-				PA	RT – <i>A</i>	A				-
1.	Define Statistics.									BTL -1	Remembering
2.	What is the addit	tion a	nd mult	iplication	n theo	orem o	n pro	bability	/?	BTL -1	Remembering
3.	Define independe	ent ev	rents.		-		10 A			BTL -1	Remembering
4.	Define mutually	exclu	sive eve	ents.	-			2		BTL -1	Remembering
5.	State the theorem	n of to	otal prob	ability	RN	1		1		BTL -1	Remembering
6	State Baye's theo	orem	22	1	5			3.0		BTL -1	Remembering
7.	A ball is drawn a balls and 5 blue l red.	t ranc palls.	lom from Find the	m a box e probabi	conta ility t	ining (hat the	f red ball	balls, 4 drawn	white is not	BTL -1	Remembering
8	From a pack of c is either a spade	ards, or a k	one caro ing.	d is draw	n. W	hat is t	the pr	obabili	ty that it	BTL -2	Understanding
9.	What is the Prob 53 Sundays?	abilit	y that a	leap year	r sele	cted at	rand	om wil	l have	BTL -4	Analyzing
10	If a box contains are selected at ra defective	75 go ndom	ood iten , find th	ns and 25 ne probab	5 defe oility	ective i that at	tems least	, and 1 one ite	2 items em is	BTL -2	Understanding
11.	A and B are ever $P(A \cap B) = \frac{1}{4}$. F	nts wi 'ind <i>F</i>	thP(A) P($\bar{A} \cap \bar{B}$	$=\frac{3}{8}$, P(B)	3) =	$\frac{1}{2}$ and				BTL -3	Applying
12.	The number of h operations has th No.of failures Probability	ardwa e fol 0 k	are failu lowing 1 2 k	res of a c p.d.f, Ca 2 2 k	comp lculat 3 k	uter sy te the v 4 3 k	vstem value 5 k	in a w of k. 6 4 k	eek of	BTL -3	Applying
13.	If $f(x) = kx^2$, 0 of k.	< <i>x</i>	< 3, is 1	to be a d	ensity	y funct	ion, f	ind the	value	BTL -2	Understanding
14.	Let X be the lifet the cdf $F(x) = 1$ -	time i • e ^{-x} , x	n years $x \ge 0$. Fi	of a mec nd P[1<	hanic $X \leq 3$	cal part 3].	t. Ass	ume th	at X has	BTL -2	Understanding
15.	The mean of Bin Find the parame	omial ters o	distrib f the dis	ution is 2 stributior	20 and 1.	d stand	lard d	eviatio	n is 4.	BTL -4	Analyzing

	_		
16.	For a Binomial distribution the mean is 6 and standard deviation is $\sqrt{2}$ Find parameters of the distribution	BTL -4	Analyzing
17.	If 20% of the bolts produced by a machine are defective, Determine the probability that out of 4 bolts chosen at random exactly one defective.	BTL -4	Analyzing
18.	If the mean and variance of a binomial distribution are respectively 6 and 2.4, find $P(x=2)$.	BTL -2	Understanding
19.	Suppose that, on an average, in every three pages of a book there is one typographical error. If the number of typographical errors on a single page of the book is a Poisson random variable. What is the probability if at least one error on a specific page of the book?	BTL -4	Analyzing
20.	If x is a Poisson distribution such that $P(x=1)=4P(x=2)$. Find its mean and variance	BTL -3	Applying
21.	Suppose that X has a Poisson distribution with parameter $\lambda = 2$. Compute P[X ≥ 1].	BTL -2	Understanding
22.	Discuss the probability density function of a Uniform distribution	BTL -3	Applying
23.	Let X be a Uniformly distributed R. V. over [-3, 3] Determine $P(X \le 2)$	BTL -3	Applying
24.	Define Normal distribution	BTL -1	Remembering
25.	State any two properties of normal distribution	BTL -2	Understanding
	PART – B		
1.	Given: The probabilities of three events A, B and C occurring are $P(A) = 0.35$, $P(B) = 0.45$ and $P(C) = 0.2$. Assuming that A, B, or C has occurred, the probabilities of another event X occurring are $P(X/A) = 0.8$, $P(X/B) = 0.65$ and $P(X/C) = 0.3$. Find $P(A/X)$, $P(B/X)$ and $P(C/X)$.	BTL -3	Applying
2.(a)	 4 cards are drawn from a well shuffled pack of cards. Find the probability that (i) All the four are queens (ii) There is one card from each suit. (iii) Two cards are diamonds and two are spades All the four cards are hearts and one of them is jack 	BTL -5	Evaluating
2.(b)	Given $\lambda = 4.2$, for a poisson distribution. Find (a) $P(X \le 2)$ (b) $P(X \ge 5)$ (c) $P(X = 8)$.	BTL-5	Evaluating
3.	Three machines all turn out nonferrous castings. Machine A produces 1% defective and Machine B- 2% and machine C – 5%. Each machine produces 1/3 of the output. An inspector examines a single casting, which he determines as non-defective. Estimate the probabilities of its having been produced by each machine	BTL -3	Applying
4.(a)	Two dice are thrown together once. Find the probabilities for getting the sum of the two numbers (i) equal to 5, (ii) multiple of 3, (iii) divisible by 4.	BTL -3	Applying
4.(b)	Messages arrive at a switch board in a Poisson manner at an average rate of 6 per hour. Find the probability that exactly 2 messages arrive within one hour, no messages arrives within one hour and at least 3	BTL -3	Applying

	messages arrive within one hour		
5.	The contents of urns I, II, III are as follows: 1 white, 2 black and 3 red balls; 2 white, 1 black and 1 red balls; 4 white, 5 black and 3 red balls; One urn is chosen at random and two balls drawn. They happen to be white and red. What is the probability that they come from urns I, II, III?	BTL -3	Applying
6. (a)	In 1989, there were three candidates for the position of principal Mr. Chatterji, Mr. Ayangar and Dr. Singh. Whose chances of getting the appointment are in the proportion 4:2:3 respectively. The probability that Mr. Chatterji is selected, would introduce co-education in the college is 0.3. The probabilities of Mr. Ayangar and Dr. Singh doing the same are respectively 0.5 and .08. What is the probability that there was co-education in the college in 1990?	BTL -3	Applying
6.(b)	Find the probability that atmost 5 defective bolts will be found in a box of 200 bolts, if it is known that 2% of such bolts are expected to be defective. $(e^{-4}=0.0183)$	BTL -3	Applying
7.	A random variable X has the following probability distribution:X01234567P(X)0k2 k2 k3 k k^2 $2k^2$ $7k^2+k$ Find(i) the value of k (ii) $P(1.5 < X < 4.5 / X > 2)$ Image: Colspan="5">Image: Colspan="5" Image: Col	BTL -1	Remembering
8.(a)	The probability mass function of a discrete R. V X is given in the following table: $\begin{array}{c c c c c c c c c c c c c c c c c c c $	BTL -4	Analyzing
8.(b)	A box contains 4 bad and 6 good tubes. Two are drawn out from the box at a time. One is tested and found to be good. What is the probability that the other one is also good?	BTL -3	Applying
9.	The probability mass function of a discrete R. V X is given in the following table $\begin{array}{c ccccccccccccccccccccccccccccccccccc$	BTL -5	Evaluating
10.(a)	The atoms of a radioactive element are randomly disintegrating. If every gram of this element, on average, emits 3.9 alpha particles per second, then what is the probability that during the next second the number of alpha particles emitted from 1 gram is (1) at most 6 (2) at least 2 and (3) at least and atmost5	BTL -6	Creating
10.(b)	If the discrete random variable X has the probability function given bythe table. x 1234	BTL -3	Applying

	$\begin{array}{ c c c c c c c c c c c c c c c c c c c$		
11.	A coin is biased so that a head is twice as likely to appear as a tail. If the coin is tossed 6 times, find the probabilities of getting (1) Exactly 2 heads, (2) at least 3 heads, (3) at most 4 heads.	BTL -4	Analyzing
12.(a)	The atoms of a radioactive element are randomly disintegrating. If every gram of this element, on average, emits 3.9 alpha particles per second, then what is the probability that during the next second the number of alpha particles emitted from 1 gram is (1) at most 6 (2) at least 2 and (3) at least and atmost5	BTL -3	Applying
12.(b)	The probability mass function of a RV X is given by $(X = r) = kr^3$, $r = 1,2,3,4$. Find (1) the value of k, $(2)P\left(\frac{1}{2} < X < \frac{5}{2}\right)$ (3) $P(X > 2)$	BTL -3	Applying
13.	In a test of 2000 electric blubs it was found that the life of a particular make was normally distributed with an average life of 2040 hours and S. D. of 60 hours. Estimate the number of blubs likely to burn for (1) More than 2150 hours (2) Less than 1950 hours (3) More than 1920 hours but less than 2160 hours.	BTL -4	Analyzing
14.(a)	4 coins were tossed simultaneously. What is the probability of getting (i) 2 heads, (ii) at least 2 heads, (iii) at most 2 heads?	BTL -3	Applying
14.(b)	A normal distribution has mean $\mu = 20$ and standard deviation $\sigma = 10$. Find $P(15 \le X \le 40)$.	BTL -3	Applying
15.	In an intelligence test administered on 1000 students, the average was 42 and standard deviation 24, find (i) the number of students exceeding a score 50. (ii) the number of students lying between 30 and 54 (iii) the value of score exceeded by top 100 students.	BTL -4	Analyzing
16.(a)	X is a normal variable with mean 30 and standard deviation of 5. Find (i) $P[26 \le X \le 40]$ (ii) $P[X \ge 45]$ use normal distribution tables.	BTL -4	Analyzing
16.(b)	A random variable X has a uniform distribution over (-3, 3). Compute (i) $P(X \le 2)$ (ii) $P(X \le 2)$ (iii) $P(X-2 \le 2)$ (iv) Find k for which $P(X \le k) = 1/3$.	BTL -3	Applying
17.	If X follows a normal distribution with mean 12 and variance 16 cm, find the probabilities for (i)P($X \le 20$)(ii) P($X \ge 20$), and (iii) P($0 \le X \le 12$)	BTL -4	Analyzing
18.(a)	If the random variable X takes values 1, 2, 3, 4 such that 2P(X = 1) = 3P(X = 2) = P(X=3) = 5P(X = 4), find the probability distribution and cumulative distribution of X	BTL -3	Applying
18.(b)	Out of 2000 families with 4 children each, Find how many family would you expect to have i) at least 1 boy ii) 2 boys.	BTL -3	Applying
	PART – C	1	
1.	In a bolt factory machines A, B, C manufacture respectively 25, 35 and 40 percent of the total. Of their output 5, 4 and 2 percent are defective bolts respectively. A bolt is drawn at random from the	BTL -4	Analyzing

	product and is found to be defective. What are the probabilities that it was manufactured by machines A, B or C?		
2.	Out of 800 families with 4 children each, how many families would be expected to have (i) 2 boys and 2 girls (ii) at least 1 boy (iii) at most 2 girls (iv) children of both sexes? Assume equal probabilities for boys and girls.	BTL -4	Analyzing
3.	In a certain factory manufacturing razor blades, there is a small chance of 1/500 for any blade to be defective. The blades are supplied in packets of 10. Use Poisson distribution to calculate the approximate number of packets containing (i) No defective (ii) One defective (iii) Two defective blades Respectively in a consignment of 10,000 packets.	BTL -2	Understanding
4.	Buses arrive at a specified stop at 15 minutes interval starting at 6 AM ie they arrive at 6 AM, 6.15AM, 6.30 AM and so on. If a passenger arrives at the stop at a time that is uniformly distributed between 6 and 6.30 AM. Find the probability that he waits (i) Less than 5 minutes for a bus. (ii) More than 10 minutes for a bus.	BTL -2	Understanding
5.	A bank manager has learnt that the length of time the customers have to wait for being attended by the teller is normally distributed with mean time of 5 minutes and standard deviation of 0.8 minutes. Find the probability that a customer has to wait (i) For less than 6 minutes (ii) For more than 3.5 minutes and (iii) Between 3.4 and 6.2 minutes.	BTL -3	Applying

UNIT II - SAMPLING DISTRIBUTION AND ESTIMATION: Introduction to sampling distributions, sampling distribution of mean and proportion, application of central limit theorem, sampling techniques - Estimation: Point and Interval estimates for population parameters of large sample and small samples, determining the sample size

Q.No.	Question	BT Level	Competence
	PART – A		
1.	Define Sampling distribution of proportion.	BTL -1	Remembering
2.	Define Probable standard error.	BTL -1	Remembering
3.	Define standard error and mention its importance.	BTL -1	Remembering
4.	Define central limit theorem	BTL -1	Remembering
5.	Write the formula of confidence interval for the difference between two population proportions for large samples.	BTL -6	Creating
6	Define stratified sampling technique	BTL -1	Remembering
7.	Briefly describe the significance level.	BTL -1	Remembering
8	Distinguish between parameter and statistic.	BTL -2	Understanding
9.	Define estimator.	BTL -1	Remembering

10	Distinguish between point estimation and interval estimation	BTL -2	Understanding
11.	Mention the properties of a good estimator.	BTL -1	Remembering
12.	Define confidence Interval.	BTL -1	Remembering
13.	What is the level of significance in testing of hypothesis	BTL -6	Creating
14.	Define Point estimate.	BTL -1	Remembering
15.	State the conditions under which a binomial distribution becomes a normal distribution	BTL -4	Analyzing
16.	If the random sample comes from a normal population, what can be said about the sampling distribution of the mean.	BTL -5	Evaluating
17.	Given a population with a standard deviation of 8.6, what sample size is needed to estimate the mean of population within \pm 0.5 with 99% confidence.	BTL -6	Creating
18.	Define Interval estimate.	BTL -6	Creating
19.	Write the formula of confidence interval for the difference between two population means for large samples.	BTL -3	Applying
20.	How large sample is useful in estimation and testing.	BTL -4	Analyzing
21.	Define estimate.	BTL -1	Remembering
22.	Define estimation.	BTL -1	Remembering
23.	What are the different types of Sampling methods?	BTL -1	Remembering
24.	Write the formula of confidence interval for the population mean for large samples.	BTL -6	Creating
25.	Write the formula of confidence interval for the difference between two population means for small samples.	BTL -6	Creating
	PART – B		
1.	 Car stereo manufacturer of A have mean lifetime of 1400 hrs with SD of 200 hrs while those of manufacturer B have mean lifetime of 1200hrs with a SD of 100 hrs. If a random sample of 120 stereos of each manufacturer are tested. i. What is the probability that the manufacturer of A's stereos will have a mean lifetime of at least 160hrs more than the manufacturer B's stereos. ii. 250hrs more than the manufacturer B stereos. 	BTL -6	Creating
2. (a)	A random sample of size 9 is obtained from a Normal population with mean 25 and if the variance 100 find the probability that the sample mean exceeds 31.2.	BTL -3	Applying
2.(b)	The mean strength of a certain cutting tool is 41.5 hrs with a standard deviation of 2.5 hrs. What is the probability that a random sample of size 50 drawn from the population will have mean between 40.5 hrs and 42 hrs.	BTL -4	Analyzing
3.	A bank has kept records of the checking balances of its customers and determined that the average daily balances of its customers is Rs.300 with a standard deviation of Rs. 48. A random sample of 144 checking accounts is selected.	BTL -6	Creating

	(i)What is the probability that the sample mean will be more than Rs. 306.60?		
	(ii)What is the probability that the sample mean will be less than Rs. 308?		
	(iii)What is probability that the sample mean will between Rs. 302 and Rs. 308?		
	(iv)What is probability that the sample mean will be atleast Rs. 296?		
4.(a)	In a quality department of manufacturing paints at the time of dispatch of decorators 30% of the containers are found to be defective. If a random sample of 500 is drawn with replacement from the population. What is the probability that the sample proportion will be lessthan 25% defective.	BTL -4	Analyzing
4.(b)	A manufacturer of watches has determined from experience that 3% of the watches he produces are defective. If a random sample of 300 watches is examined, what is the probability that the proportion defective is between 0.02 and 0.035.	BTL-2	Understanding
5.	 A research troop stated that 16% of the firms of the particular type A increased their market research budget in the five year proceedings the studying for type B firms, the figure was 9% 1. What are the mean and SD of the sampling distribution of the difference between sample proportion based on independent random samples, 100 firms from each type. 2. What proportion of the sample difference would be between 0.05 and 0.10. 	BTL -4	Analyzing
6. (a)	A random sample of size 100 is taken from a population whose mean is 60 and variance is 400. Using central limit theorem find what probability that we can assert that the mean of the sample will not differ from μ more than 4?	BTL-5	Evaluating
6.(b)	An economist wishes to estimate the average the family income in a certain population. The population SD is known to be \$4.500, and the economist uses a random sample of size n=225. What is the probability that the sample mean will fall within \$800 of the population mean.	BTL -6	Creating
7.	In a test given to two group of students the marks obtained were as follows, First group : 18 20 36 50 49 36 34 47 61 Second group: 29 28 26 35 30 44 46 Construct a 95% confidence interval on the mean marks secured by students.	BTL-2	Understanding
8.(a)	A sample of 100 measurements at breaking strength of cotton threads gave a mean of 7.4 and SD of 1.2gms. Find 95% confidence limits for the mean breaking strength.	BTL -3	Applying

8.(b)	A mining company needs to estimate the average amount of copper are per ton mined. A random sample of 50 tons gives a sample mean of 146.75 pounds. The population SD is assumed to be 35.2 pounds. Give a 95% confidence interval for the average amount of copper in the population of tons mined.	BTL -6	Creating
9.	In a certain factory there are two independent process manufacturing the same item. The average weight in a sample of 250 items produced from one process is found to be 120 O_{zs} with a S.D of 12 O_{zs} . While the corresponding figures in a sample of 400 items from the other process are 124 O_{zs} and 14 O_{zs} . Find the 95% and 99% confidence limits for the difference in the average weight of items produced by the processes respectively.	BTL -5	Evaluating
10.(a)	The average travel time taken based on a random sample of 10 people working in a company to reach the office is 40 mins with the SD of 10 mins. Estabilish the 95% confidence interval for the mean travel time of everyone in the company to design the working hours.	BTL -5	Evaluating
10.(b)	A transportation company wants to estimate the average length of time goods are in transit across the country. A random sample of 20 shipments gives $\overline{X} = 2.6$ days and s = 0.4 day. Give 99% confidence interval for the average transit time.	BTL -3	Applying
11.	 A sample poll of 100 voters chosen at random from all voters in a given district indicated that 55% of them were in favour of a particular candidate. Find 95% 99% confidence limits for the proportion of all the voters in favour of this candidate. 	BTL -4	Analyzing
12.(a)	A survey of 748 randomly selected employees of dot.com companies showed that 35% feel secure about their jobs. Give a 90% confidence interval for the proportion of dot.com company employees who feel secure about their jobs.	BTL -6	Creating
12.(b)	In order to compare the intelligent quotient of students, two schools were selected. A random sample of 90 students was selected from each school. At school A the mean IQ is 109 and SD is 11. At school B, the mean IQ is 98 and SD is 9. Construct 95% confidence interval for the difference between IQ of two schools.	BTL -6	Creating
13.	Two operators perform the same operation of applying plastic coating to a part. A random sample of 100 parts from the first operator shows that 6 are non-conforming. A random sample of 200 parts from the second operator shows that 8 are non-conforming. Find a 90% confidence interval for the difference in the proportion of non-conforming parts produced by the two	BTL -4	Analyzing

	operators.		
14.(a)	A cigarette manufacturer wishes to use a random sample to estimate the average nicotine content. The sampling error should not be more than 1 mg above or below the true mean with a 99% confidence. The population SD is 4mg. What sample size should company use to satisfy these requirements.	BTL -6	Creating
14.(b)	For a test market find the sample size needed to estimate the true proportion of consumers satisfied with a certain new product within ± 0.04 at 90% confidence level.	BTL -3	Applying
15.	A market research firm wants to estimate the share that foreign companies have in the U.S market for certain products. A random sample of 100 consumers is obtained, and 34 people in the sample are found to be users of foreign-made products; the rest are users of domestic products. Give 95% and 99% confidence level for the share of foreign products in this product.	BTL -4	Analyzing
16.(a)	For a particular brand of TV picture tube, it is known that the mean operating life of the tubes is 1000 hours with a standard deviation of 250 hours, what is the probability that the mean for a random sample of size 25 will be between 950 and 1050 hours?	BTL -4	Analyzing
16.(b)	Strength of wire were produced by a company A has a mean of 4500kg and a S.D of 200kg, company B A has a mean of 4000kg and a S.D of 300kg. If 50 wires of company A and 100 wires of company B are selected at random and tested for strength. what is the probability that the mean strength of A will be at least 600kg more than that of B.	BTL -3	Applying
17.	Explain the types of Sampling methods.	BTL -5	Evaluating
18.(a)	A manufacturer of pens has determined from experience that 4% of the pens produced are defective. If a random sample of 400 pens is examined, what is the probability of proportion of defects between 0.025 and 0.048	BTL -3	Applying
18.(b)	The life time of a certain brand of an electric bulb may be considered as a random variable with mean 1200 hours and standard deviation 250 hours. Find the probability using central limit theorem that the average life time of 60 bulbs exceed 1250 hours.	BTL -3	Applying
	PART – C	1	
1.	Mary, an auditor for a large credit card company, knows that, on average, the monthly balance of any customer is Rs.112, and the standard deviation is Rs.56. If Mary audits 50 randomly selected accounts, What is the probability that the sample average balance is	BTL -6	Creating

	(1) Below Rs.100 (ii)Between Rs 100 and Rs 130		
	From a population of 540, a sample of 60 individual is taken		
	From this sample, the mean is found to 6.2 and the standard		
2.	deviation 1.368	BTL-2	Understanding
	(i) Find the estimated standard error of the mean.	2122	0 110010 101010
	(ii) Construct a 95% confidence interval for the mean.		
3.	Explain the properties of good point estimator.	BTL -4	Analyzing
	A distribution with unknown mean has variance equal to 1.5.		
	Use central limit theorem to find how large a sample should be		
4.	taken from the distribution in order that the probability will be	BTL -4	Analyzing
	at least 0.95 that the sample mean will be within 0.5 of the		
	population mean.		
	Two independent samples are chosen from two schools A and		
	B and a common test is given in a subject. The scores of the		
	students are as follows.		
5.	School A : 76 68 70 43 94 68 33	DIL-2	Understanding
	School B : 40 48 92 85 70 76 68 22		C
	Construct a 95% and 99% confidence interval on the mean		
	marks secured by students.		
UNIT I	II - TESTS OF HYPOTHESIS- PARAMETRIC TESTS: Hypo	othesis testii	g: one sample and
two sam	ple tests for means and proportions of large samples (z-test) one sa	ample and t	wo sample tests for
means	f small samples (t-test) E-test for two sample standard deviations. A	NOVA one	and two way

	PART – B		
1.	A machine puts out 16 imperfect articles in a sample of 500. After the machine is overhauled it puts out 3 imperfect articles in a batch of 100. Has the machine Improved?	BTL-5	Evaluating
2.(a)	In a sample of 1000 people in Mumbai 540 are rice eaters and the rest are wheat eaters. Can we assume that both rice and wheat are equally popular in this state at 1% level of significance?	BTL -5	Evaluating
2.(b)	The mean lifetime of a sample of 100 lite tubes produced by a Company is found to be 1580 hours with standard deviation of 90 hours. Test hypothesis that the mean lifetime of tubes produced by the company is 1600 hours.	BTL-5	Evaluating
3.	A sample of heights of 6400 Englishmen has a mean of 170cm and a SD of 6.4cm, While a sample of heights of 1600 Americans has a mean of 172cm and SD of 6.3cm. Do the data indicate that Americans are on the average taller than Englishmen?	BTL-2	Understanding
4.(a)	40 people were attacked by a diseases and only 36 survived. Will you reject the hypothesis that the survival rate if attacked by this diseases, is 85% in favor of the hypothesis that it is more at 5% level of significance?	BTL-2	Understanding
4.(b)	A sample of 100 students is taken from a large population. The mean height of the students in this sample is 160 cm. Can it be reasonably regarded that this sample is from a population of mean 165 cm and SD 10 cm?	BTL-2	Understanding
5.	Two independent samples of 8 and 7 items respectively had the following values. Sample I : 9 11 13 11 15 9 12 14 Sample II: 10 12 10 14 9 8 10 Is the difference between the means of samples significant?	BTL-5	Evaluating
6.(a)	Ten oil tins are taken at random from an automatic filling machine. The mean weight of the tins is 15.8kg and SD is 0.5kg. Does the sample mean differ significantly from the intended weight of 16kg?	BTL-6	Creating
6.(b)	In one sample of 8 observations the sum of the squares of deviations of the sample values from the sample mean was 84.4 and in the other sample of 10 observations it was 102.6. Test whether this difference is significant at 5% level, given that the 5% point of F for v_1 =7 and v_2 = 9 degrees of freedom is 3.29?	BTL-2	Understanding
7.	Two random samples drawn from two normal populations are	BTL-4	Analyzing

	(\mathbf{v})	Compute σT .						

	(iii) Use $\alpha = 0.05$ and test to determine if there is a significant		
	difference in the population of the sales of the two groups		
	A company's trainees are randomly assigned to groups which are		
	taught a certain industrial inspection procedure by 3 different methods.		
	At the end of the inspection period they are tested for inspection		
	performance quality. The following are their scores.		
5.	Method A: 80 83 79 85 90 68	BTL-3	Applying
	Method B: 82 84 60 72 86 67 91		
	Method C: 93 65 77 78 88		
	Use H test to determine at 0.05 LOS whether the three methods are		
	equally effective.		

UNIT V - **CORRELATION AND REGRESSION:** Correlation – Coefficient of Determination – Rank Correlation – Regression – Estimation of Regression line – Method of Least Squares – Standard Error of estimate.

Q.No.	Question	BT Level	Competence
	PART – A	1	
1.	Define regression coefficient?	BTL -1	Remembering
2.	Write the formula for finding standard error of the regression coefficient.	BTL -6	Creating
3.	Write the Properties of Correlation Coefficient?	BTL -1	Remembering
4.	What is the angle between the regression lines?	BTL -1	Remembering
5.	When is linear regression used?	BTL -1	Remembering
6	Distinguish between correlation and regression	BTL -2	Understanding
7.	What is regression analysis?	BTL -6	Creating
8	What do you interpret if the $r = 0$, $r = +1$ and $r = -1$?	BTL -1	Remembering
9.	Specify the range of correlation.	BTL -6	Creating
10	Define standard error of estimate?	BTL -4	Analyzing
11.	Define correlation coefficient between two variables.	BTL -1	Remembering
12.	Write the formula for finding the standard error of estimate?	BTL -6	Creating
13.	If the equations of the regression lines are $x+2y=5$ and $2x+3y=8$, find the correlation coefficient between x and y.	BTL -3	Applying
14.	Find the mean values of regression lines are $2y-x = 50$ and $3y-2x = 10$.	BTL -1	Remembering
15.	Write the correlation coefficient in terms of regression Coefficients.	BTL -6	Creating
16.	Write the Equations of Regression lines.	BTL -1	Remembering
17.	Explain the difference between the coefficient of determination and the coefficient of correlation.	BTL -1	Remembering

18.	What are the various methods in correlation?	BTL -1	Remembering
19.	If the equations of the regression lines are $x+2y=5$ and $2x+3y=8$, find the mean of X and Y.	BTL -1	Remembering
20.	What is positive and negative correlation?	BTL -1	Remembering
21.	State any two uses of regression Analysis.	BTL -3	Applying
22.	The regression equations are $x + 6y = 14$ and $2x + 3y = 1$. Find the correlation coefficient between X & Y.	BTL4	Analyzing
23.	If $\overline{X} = 970$, $\overline{Y} = 18$, $\sigma_x = 38$, $\sigma_y = 2$ and $r = 0.6$, Find the line of regression of X on Y.	BTL4	Analyzing
24.	The regression equations are $x + 6y = 14$ and $2x + 3y = 1$. Find the mean of X & Y.	BTL4	Analyzing
25.	The regression equations are $3x + 2y = 26$ and $6x + y = 31$. Find the correlation coefficient.	BTL5	Evaluating
	PART – B		
1.	The following data relate to marketing expenditure in lakhs of rupees and the corresponding sales of a product in crores of rupees. Estimate the marketing expenditure to attain a sales target of rupees 40 crores Marketing Expenditure : 10 12 15 20 23 Product Sales : 14 17 23 21 25. Also find the coefficient of correlation between Marketing Expenditure and sales.	BTL -3	Applying
2.(a)	The following data pertains of X = Revenue (in '000 of rupees) generated at a Corporate Hospital and Y = Number of Patients (in '00) arrived for the last ten years. X 86 95 75 85 90 98 112 74 100 110 Y 21 24 18 24 22 30 27 18 25 28 Find the Karl Pearson's coefficient of correlation and give your comment.	BTL -4	Analyzing
2.(b)	Obtain the two regression lines: X 45 48 50 55 65 70 75 72 80 85 y 25 30 35 30 40 50 45 55 60 65	BTL-5	Evaluating
3.	Out of the two lines of regression given by $x+2y-5=0$ and $2x+3y-8=0$, which one is the regression line of X and Y? Use the equations to find the means of X and Y. If the variance of X is 12, find the variance of Y?	BTL -2	Understanding
4.(a)	Calculate the correlation coefficient for the following heights (in inches) of fathers(x) and their sons (y) X: 65 66 67 67 68 69 70 72 Y: 67 68 65 68 72 72 69 71	BTL -1	Remembering
4.(b)	Cost accountants often estimate overhead based on the level of production. At the standard Knitting Co., they have collected information on overhead expenses and units produced at different plants and want to estimate regression equation to predict future overhead. Overhead 191 170 272 155 280 173 234 116 153 178	BTL -6	Creating

	 (i) Estimate the marks in English when marks in Mathematics is 70? (ii) Estimate the marks in Mathematics when marks in 		
	English is 54?		
10.(a)	Find the correlation coefficient for the following data: X: 10 14 18 22 26 30	BTL-3	Applying
()	Y: 18 12 24 6 30 36		
10.(b)	Find the regression lines, from the following data:		Applying
	X: 6 8 10 18 20 23	BTL -3	
	Y: 40 36 20 14 10 2		
	Given that $r = 10 \sum Y = 120 \sum Y^2 = 2288 \sum Y = 220 \sum Y^2 = 5506$ and $\sum YY = 2465$,	Creating
11.	$n = 10, \Sigma X = 130, \Sigma X = 2288, \Sigma Y = 220, \Sigma Y = 5500, and \Sigma X Y = 540.$	· BTL -6	
	Y.		
	The following are the annual profits, in thousands of rupees, in a		
	business.		Analyzing
	Veor 1 2 2 2 4 9		
12.	10a 19 19 19 19 19 19 19 1	BTL -4	
	Profits 83 92 71 90 169 191		
	Calculate the trend values by the method of least squares. Also		
	estimate the profit for the year 1979.		
	Promotional expenses and sales data for an equipment	BTL -3	Applying
	and comment		
13.			
	Promotional expenses in 7 10 9 4 11 5 3		
	Lakhs 12 14 13 5 15 7 4		
	Calculate the trend values by the method of least squares. Also		
	Calculate the sales for the years 1999 and 2000		
14.	Vacuation 10 00 00 00 00 00 00 00 00 00 00 00 00	BTL-3	Remembering
	rear 561		
	Values 125 128 133 135 140 141 143		
15	The equations of two variables X and Y as follows $3X+2Y-26 = 0$,		A
15.	6X + Y - 31 = 0 Find the means, regression coefficient & coefficient of correlation.	BIL-4	Analyzing
	X independent variable 80 120 90 240 130 370 100 160		
16	Y independent variable 36 25 33 15 28 19 20 22	BTL -3	Applying
10.	(i) Develop a regression equation that best describes this data.		rippiying
	(11) Calculate karl-pearson correlation coefficient.		
17.	statistics study guide for 12 semesters and would like to estimate		
	the relationship between sales and no. of sections of elementary	BTL-6	Creating
	statistics taught in each semester. The following data have been		

	collection:
