DEPARTMENT OF ELECTRONICS AND INSTRUMENTATION ENGINEERING

QUESTION BANK

SUBJECT : EI3462 INDUSTRIAL INSTRUMENTATION-I

SEM / YEAR : IV/II

UNIT I MEASUREMENT OF FORCE, TORQUE AND SPEED				
Different types of load cells: Hydraulic, Pneumatic, Strain gauge, Magneto-elastic and Piezoelectric load cells - Different methods of torque measurement: Strain gauge, Relative angular twist. Speed measurement: Capacitive tacho, Drag cup type tacho, D.C and A.C tacho generators – Stroboscope.				
PART A				
Q.No	Question	COs	BT Level	Competence
1.	What is meant by Strobotron?	CO1	BTL 1	Remember
2.	What are the properties of materials used for Piezo electric transducers?	CO1	BTL 1	Remember
3.	Define gauge factor for strain gauge.	CO1	BTL 1	Remember
4.	What is magneto-elastic effect?	CO1	BTL 1	Remember
5.	What are the merits of stroboscope?	CO1	BTL 1	Remember
6.	List the main parts of a hydraulic load cell.	CO1	BTL 1	Remember
7.	Define Load Cell.	CO1	BTL 2	Understand
8.	What is the principle of drag cup type Tachometer?	CO1	BTL 2	Understand
9.	Give the different types of strain gauge load cell.	CO1	BTL 2	Understand
10.	Write the significance of stroboscope.	CO1	BTL 2	Understand
11.	Write the significance of the Load cell.	CO1	BTL 2	Understand
12.	What are the classifications of Tachometer?	CO1	BTL 2	Understand
13.	State the principle of DC Tacho generator.	CO1	BTL 2	Understand
14.	Show how Elastic materials are used for force measurement.	CO1	BTL 2	Understand
15.	List the types of load cell.	CO1	BTL 1	Remember
16.	Why are dummy gauges used? In what way they affect the output of a strain gauge bridge?	CO1	BTL 1	Remember
17.	Point out the measurement procedure for force using load cell.	CO1	BTL 2	Understand
18.	Identify the factors affecting the accuracy of force measurement.	CO1	BTL 2	Understand
19.	Justify the effect of Temperature in strain gauge bridge	CO1	BTL 1	Remember

	circuitry? How it is to be compensated?			
20.	Summarize the applications of load cell.	CO1	BTL 1	Remember
21.	Prepare a bridge circuit for any measuring instrument and justify its need.	CO1	BTL 1	Remember
22.	Propose a suitable signal conditioning circuit for LVDT based force measurement system of your own.	CO1	BTL 2	Understand
23.	List the factors to be considered in the selection of load cell for a application.	CO1	BTL 2	Understand
24.	What are the advantages of measurement of torque by using electronic techniques.	CO1	BTL 2	Understand
PART B				
1.	Explain the principle and working of a strain gauge. Also describe its usefulness in measurement of torque. (16)	CO1	BTL 5	Evaluate
2.	Explain the principle and construction of : (i) Hydraulic load cell. (8) (ii) Drag cup DC tachogenerator. (8)	CO1	BTL 4	Analyze
3.	Describe about Magneto Elastic and Piezo Electric Load cell with a neat diagram. (16)	CO1	BTL 3	Apply
4.	Draw the diagram and describe the working, construction of: (i) Inductive torque transducer. (8) (ii) Electric balance. (8)	CO1	BTL 3	Apply
5.	Discuss the construction and working of DC and AC Tachogenerator with diagram and mention its advantages and disadvantages. (16)	CO1	BTL 3	Apply
6.	Briefly describe the working of different speed measurement methods. (16)	CO1	BTL 3	Apply
7.	With necessary diagram, describe how speed can be measured using Revolution counter. (16)	CO1	BTL 3	Apply
8.	Describe how proximity sensor can be used for torque measurement, explain with relevant diagram. (16)	CO1	BTL 3	Apply
9.	(i) Illustrate the basic means of force measurement. (8) (ii) Illustrate with neat sketches, the working of pneumatic load cell. (8)	CO1	BTL 3	Apply
10.	With neat diagram explain ,the construction and working of (i) Strain gauge load cell. (8) (ii) Stroboscope. (8)	CO1	BTL 3	Apply
11.	(i) Illustrate the construction, working of optical torsion meter. (8) (ii) Describe the torque measurement principle involving relative angular twist. (8)	CO1	BTL 3	Apply

12.	Explain the following methods of measurement of torque: (i) Capacitive torque transducer. (8) (ii) Magneto strictive methods. (8)	CO1	BTL 4	Analyze
13.	(i) Illustrate the working of Strobotron. (8) (ii)Mention the advantages and disadvantages of stroboscope measurement technique? (8)	CO1	BTL 3	Apply
14.	Propose a method for strain gauge torsion meter. Discuss the construction, working and advantage of the same.(16)	CO1	BTL 3	Apply
15.	Explain any two types of torque measurement with neat sketch. (16)	CO1	BTL 3	Apply
16.	A toothed rotor tachometer is used in a digital counter for measuring speed of rotation of the shaft on which the wheel is mounted. The grating period is 10^3 us and a reading of 0004 is obtained on the four digit display. Determine the speed of the shaft if the number of teeth on rotor is 150. (16)	CO1	BTL 3	Apply
17.	The frequency of the flashes of a stroboscope is adjusted such that a disc with 20 points mounted on the shaft of the machine seems to be at standstill. If the adjusted frequency of the flashes is 5000 per minute and approximate speed of the machine is 765 rpm given by the other method, determine the correct speed of the machine in rpm. (16)	CO1	BTL 4	Analyze

UNIT II -MEASUREMENT OF ACCELERATION, VIBRATION AND DENSITY				
Accelerometers :- LVDT, Piezoelectric, Strain gauge and Variable reluctance type accelerometers				
Mechanical type vibration instruments - Seismic instruments as accelerometer - Vibration sensor				
Calibration of vibration pickups - Units of density and specific gravity - Baume scale and API scale				
Pressure type densitometers - Float type densitometers - Ultrasonic densitometer – gas densitometer				
PART A				
Q.No	Question	COs	BT Level	Competence
1.	What is a seismic instrument? State the function of seismic transducer.	CO2	BTL 1	Remember
2.	List the properties of spring employed seismic type of instrument for measurement of vibration and acceleration.	CO2	BTL 1	Remember
3.	State the principle of operation of Ultrasonic densitometer.	CO2	BTL 1	Remember
4.	Give any two features of piezo-electric accelerometer.	CO2	BTL 1	Remember
5.	What is meant by vibration pickups? Give example.	CO2	BTL 1	Remember
6.	Define specific weight and density.	CO2	BTL 1	Remember

7.	State the properties of semiconductor strain gauge.	CO2	BTL 2	Understand
8.	Give the units of density used in industries.	CO2	BTL 2	Understand
9.	Mention the advantages of LVDT type accelerometers.	CO2	BTL 2	Understand
10.	Summarize the different ways to measure density.	CO2	BTL 2	Understand
11.	Specify the applications of bridge type gas densitometer.	CO2	BTL 2	Understand
12.	What is the basic principle of strain gauge accelerometer?	CO2	BTL 2	Understand
13.	Draw the block diagram and label the parts of Piezo electric type vibration pickup.	CO2	BTL 1	Remember
14.	Examine the quantities required in a vibration measurement system.	CO2	BTL 2	Understand
15.	Show the advantages of mechanical type vibration measuring instruments.	CO2	BTL 1	Remember
16.	Draw the block diagram of Seismic transducer.	CO2	BTL 2	Understand
17.	An accelerometer has a seismic mass of 0.05kg and a spring constant of 3000 N/m. Maximum mass displacement is +/- 0.02 m. Calculate the natural frequency.	CO2	BTL 1	Remember
18.	Differentiate relative and absolute Acceleration measurement.	CO2	BTL 2	Understand
19.	Realize the role of Baume scale and API scale in instrumentation.	CO2	BTL 1	Remember
20.	Differentiate the two modes of operation of accelerometer.	CO2	BTL 2	Understand
21.	Compare the terms specific weight and specific gravity.	CO2	BTL 1	Remember
22.	Criticize how a seismic instrument acts as accelerometer.	CO2	BTL 2	Understand
23.	Formulate the expression for sinusoidal vibration.	CO2	BTL 1	Remember
24.	Design a setup for Gas densitometer.	CO2	BTL 2	Understand
PART B				
1.	(i) Explain about the working of LVDT type and Piezo electric type accelerometers which are used for measurement of acceleration. (8) (ii) Write their advantages and disadvantages. (8)	CO2	BTL 4	Analyze
2.	An accelerometer has a seismic mass of 0.06 kg and a spring constant of 4500 N/m. Maximum mass displacement is ± 0.025 m (before the mass hits the top). Determine i) maximum measurable acceleration and ii) natural frequency (16)	CO2	BTL 4	Analyze
3.	Discriminate the seismic instruments as a vibrometer and accelerometer. (16)	CO2	BTL 3	Apply
4.	Discuss about the quantities involved in vibration measurement. Explain the operation of seismic transducer in different modes of operation. (16)	CO2	BTL 3	Apply

5.	In an LVDT accelerometer the outputs are 0.4 mV/mm with a ± 25 mm core displacement. The spring constant is 300 N/m and the mass of the core is 50g. Determine (i) maximum measurable acceleration (ii) natural frequency and (iii) sensitivity of the accelerometer. (16)	CO2	BTL 3	Apply
6.	Investigate how relative motion is measured using seismic instruments. (16)	CO2	BTL 4	Analyze
7.	(i) What is a vibrational pick up? Explain about the nature of vibration. (8) (ii) What are the quantities involved in Vibration Measurements? (8)	CO2	BTL 4	Analyze
8.	(i) Describe about the basic of Vibration Measurement System. (8) (ii) Describe the different methods of controlling exposure to vibration. (8)	CO2	BTL 4	Analyze
9.	(i) Explain in detail about Variable reluctance accelerometer with a neat sketch. (8) (ii) Explain in detail about strain gauge accelerometer. (8)	CO2	BTL 4	Analyze
10.	Draw the schematic diagram of Pressure head type densitometer and explain its working and construction (16)	CO2	BTL 4	Analyze
11.	Explain the following with a neat sketch (i) Float type densitometer. (8) (ii) Electromagnetic suspension type gas densitometer. (8)	CO2	BTL 5	Evaluate
12.	Briefly describe about the construction and working principle of Ultrasonic densitometer. (16)	CO2	BTL 3	Apply
13.	Briefly describe about the construction and working principle of Hydrostatic type densitometer. (16)	CO2	BTL 3	Apply
14.	Explain the working and construction of displacement-type densitometers. (16)	CO2	BTL 3	Apply
15.	Mention in detail about the API scale and Baume scale. (16)	CO2	BTL 3	Apply
16.	Explain the working and construction of Thermal gas densitometer. (16)	CO2	BTL 4	Analyze
17.	Illustrate in detail about the calibration of vibration pickup. (16)	CO2	BTL 3	Apply

UNIT III MEASUREMENT OF VISCOSITY, HUMIDITY AND MOISTURE
Viscosity: Saybolt viscometer - Rotameter type and Torque type viscometers – Consistency Meters – Humidity: Dry and wet bulb psychrometers – Resistive and capacitive type hygrometers – Dew cell – Commercial type dew meter. Moisture: Different methods of moisture measurements – Thermal, Conductivity and Capacitive sensors, Microwave, IR and NMR sensors, Application of moisture measurement - Moisture measurement in solids.
PART A

Q.No	Question	COs	BT Level	Competence
1.	Outline the limitations of psychrometer.	CO3	BTL 2	Understand
2.	Distinguish between dry and wet bulb psychrometer.	CO3	BTL 2	Understand
3.	Illustrate the term viscosity.	CO3	BTL 2	Understand
4.	Define psychrometer.	CO3	BTL 2	Understand
5.	Compare Saybolt and rotary type viscometers in terms of principle of operation.	CO3	BTL 2	Understand
6.	Differentiate Newtonian and non-Newtonian fluids.	CO3	BTL 2	Understand
7.	Write down the uses of anemometer system.	CO3	BTL 1	Remember
8.	Explain humidity.	CO3	BTL 2	Understand
9.	State the advantages of Aluminium Oxide Hygrometer.	CO3	BTL 2	Understand
10.	List the limitations of Aluminium Oxide Hygrometer sensor.	CO3	BTL 2	Understand
11.	What are the commonly used electrical transducer used for the humidity measurement.	CO3	BTL 2	Understand
12.	Explain about the relative humidity of the substance.	CO3	BTL 2	Understand
13.	What is meant by dew-point temperature? What is the dew-point temperature of a gas or air?	CO3	BTL 1	Remember
14.	Mention the factors which should be considered as possible sources of error in humidity measurements.	CO3	BTL 2	Understand
15.	Define kinematic viscosity.	CO3	BTL 1	Remember
16.	Write the principle of dew cell.	CO3	BTL 2	Understand
17.	What do you mean by the term consistency?	CO3	BTL 1	Remember
18.	Justify the importance of viscosity measurement for industrial process.	CO3	BTL 2	Understand
19.	Compare and contrast about fluidity and relative humidity.	CO3	BTL 2	Understand
20.	Define fluidity and relative humidity.	CO3	BTL 1	Remember
21.	Differentiate kinematic viscosity from specific viscosity.	CO3	BTL 1	Remember
22.	Examine the different types of viscometer.	CO3	BTL 1	Remember
23.	Which device is suitable for measuring the level of corrosive and abrasive liquids?	CO3	BTL 1	Remember
24.	What is meant by viscosity index?	CO3	BTL 1	Remember
PART B				
1.	Explain the different methods of consistency measurement. (16)	CO3	BTL 4	Analyze
2.	(i) Define the terms associated with viscosity. (8) (ii) Explain the principle of operation of commercial dew point meter. (8)	CO3	BTL 4	Analyze
3.	Describe the different methods used for measurement of Humidity. (16)	CO3	BTL 4	Analyze
4.	Explain the working of industrial type dew point	CO3	BTL 4	Analyze

	determination. (16)			
5.	(i) Explain the measurement of moisture content of solid bodies by measuring electrical conductivity. (8) (ii) How relative humidity is measured using automatic electron psychrometer? (8)	CO3	BTL 4	Analyze
6.	Explain in detail about dry and wet bulb psychrometer. (16)	CO3	BTL 3	Apply
7.	Describe the principle of humidity measurement and also explain the working principle of any one type of hygrometer with neat sketch. (16)	CO3	BTL 4	Analyze
8.	Discuss the principle of operation of different methods of moisture measurement. (16)	CO3	BTL 3	Apply
9.	Explain the working principle of hot wire electrode type hygrometer for humidity measurement with neat sketch. (16)	CO3	BTL 4	Analyze
10.	(i)What is psychrometer? (3) (ii)How does it differ from hygrometer? (3) (iii)Explain any one Psychrometer in detail. (10)	CO3	BTL 3	Apply
11.	Explain Rotameter type viscometer with a neat sketch. (16)	CO3	BTL 4	Analyze
12.	Briefly describe about consistency meters with neat sketch. (16)	CO3	BTL 3	Apply
13.	Explain how moisture is measured in granular materials and solid penetrable materials. (16)	CO3	BTL 3	Apply
14.	Explain the conductivity and IR sensors used in moisture, humidity and viscosity measurement. (16)	CO3	BTL 3	Apply
15.	Explain the microwave and NMR and IR probes used in moisture, humidity and viscosity measurement. (16)	CO3	BTL 3	Apply
16.	Illustrate with neat sketch about Saybolt Viscometer. (16)	CO3	BTL 3	Apply
17.	(i) Describe the Chemical reaction method of measuring moisture. (8) (ii)Write short notes on moisture measurement in paper industry. (8)	CO3	BTL 3	Apply

UNIT IV TEMPERATURE MEASUREMENT

Definitions and standards – Primary and secondary fixed points – Different types of filled in system thermometers – Sources of errors in filled in systems and their compensation – Bimetallic thermometers – IC sensors – Thermocouples: Laws of thermocouple, Fabrication of industrial thermocouples, Reference junctions compensation, Signal conditioning for thermocouple, Commercial circuits for cold junction compensation, Response of thermocouple, Special techniques

for measuring high temperature using thermocouple – Radiation fundamentals - Radiation methods of temperature measurement – Total radiation pyrometers – Optical pyrometers – Two color radiation pyrometers – Fiber optic sensor for temperature measurement – Thermograph, Temperature switches and thermostats – Temperature sensor selection, Installation and Calibration.

PART A

Q.No	Question	COs	BT Level	Competence
1.	List the sources of error in filled in system thermometer.	CO4	BTL 1	Remember
2.	Show the relationship between Celsius and Fahrenheit.	CO4	BTL 1	Remember
3.	What are the primary standards for temperature measuring calibration?	CO4	BTL 1	Remember
4.	State the law of Homogeneous metals.	CO4	BTL 2	Understand
5.	State the law of Intermediate metals.	CO4	BTL 2	Understand
6.	Define boiling point, freezing point and triple point.	CO4	BTL 1	Remember
7.	Illustrate the working principle of bimetallic thermometer.	CO4	BTL 2	Understand
8.	Classify the different temperature measurement types using change in physical properties.	CO4	BTL 2	Understand
9.	Define thermocouple.	CO4	BTL 2	Understand
10.	Explain Peltier effect.	CO4	BTL 2	Understand
11.	Draw the response curve for different bimetallic elements.	CO4	BTL 2	Understand
12.	Draw the different compensation types in filled in system thermometers.	CO4	BTL 2	Understand
13.	Sketch the response curves for resistance thermometers in air and water.	CO4	BTL 2	Understand
14.	Point out the operation of optical pyrometer.	CO4	BTL 2	Understand
15.	A bimetal element formed with stainless steel and invar at 100°C is raised to 200°C . Each strip has a thickness 0.0107cm , calculate ρ .	CO4	BTL 2	Understand
16.	Write down the classification of Expansion thermometers.	CO4	BTL 1	Remember
17.	Assess the criteria to be considered while selecting a temperature sensor.	CO4	BTL 1	Remember
18.	Propose the sources of error is occurring in filled system thermometer.	CO4	BTL 1	Remember
19.	Write the features of liquid in glass thermometer.	CO4	BTL 1	Remember
20.	State the selective radiation pyrometer principle.	CO4	BTL 1	Remember
21.	List any four types of Thermocouples with composition and temperature range.	CO4	BTL 1	Remember
22.	Illustrate the need for cold junction compensation.	CO4	BTL 2	Understand
23.	Sketch the thermoelectric characteristics of	CO4	BTL 2	Understand

	thermocouple.			
24.	Summarize the application of thermograph and thermostat.	CO4	BTL 2	Understand
PART B				
1.	(i) Demonstrate the applications of bimetallic thermometer in detail. (8) (ii) Mention the merits and demerits of bimetallic thermometer. (8)	CO4	BTL 3	Apply
2.	Discuss the various types of filled in system thermometers. What are the possible sources of errors in filled-in thermometers and how are they compensated? (16)	CO4	BTL 3	Apply
3.	With neat sketch, describe the construction and working principle of gas expansion type thermometer. (16)	CO4	BTL 3	Apply
4.	Explain the construction and working principle of Total radiation pyrometer. (16)	CO4	BTL 4	Analyze
5.	Explain the construction and working principle of Optical pyrometer. (16)	CO4	BTL 4	Analyze
6.	(i) Name different types of Pyrometer and recall the basic working principle of Pyrometer. (8) (ii) Describe the working principle of two colour radiation pyrometers. (8)	CO4	BTL 4	Analyze
7.	With neat sketch, describe the construction and working principle of Fluid expansion type thermometer. (16)	CO4	BTL 3	Apply
8.	(i) Elaborate how the fiber optic temperature measurement is advantageous than other methods? (8) (ii) Explain in detail about the cold junction compensation used in thermocouple. (8)	CO4	BTL 4	Analyze
9.	Demonstrate the different types of thermocouple with necessary specification. (16)	CO4	BTL 3	Apply
10.	Describe the special techniques adopted for measuring high temperature using thermocouples. (16)	CO4	BTL 3	Apply
11.	Determine the thermoelectric sensitivity and emf developed in a thermocouple made of copper and constantan for a temperature difference of 25°C between its junctions. Given that thermo-electric emfs of copper and constantan against platinum are 7.4 and -34.4 μV per °C temperature difference. (16)	CO4	BTL 3	Apply
12.	(i) Describe the advantages and disadvantages of optical pyrometer. (8) (ii) Describe the applications of optical pyrometer in detail. (8)	CO4	BTL 3	Apply
13.	Explain about the construction and working of different	CO4	BTL 4	Analyze

	types of radiation pyrometer with neat sketch. (16)			
14.	Explain in detail about Thermograph, Temperature switches and thermostats. (16)	CO4	BTL 4	Analyze
15.	Draw and explain the signal conditioning circuit diagram of thermocouple. (16)	CO4	BTL 4	Analyze
16.	Prepare a short note on Temperature sensor selection, Installation and its Calibration. (16)	CO4	BTL 4	Analyze
17.	A copper constantan thermocouple has $\alpha = 37.5 \mu\text{V}/^\circ\text{C}$ and $\beta = 0.0045 \mu\text{V}/^\circ\text{C}$. Determine the emf developed by the thermocouple when its hot junction is at 200°C and cold junction is kept in ice. (16)	CO4	BTL 4	Analyze

UNIT V PRESSURE MEASUREMENT

Units of pressure – Manometers: Different types, Elastic type pressure gauges: Bourdon tube, Bellows, Diaphragms and Capsules - Electrical methods: Elastic elements with LVDT and strain gauges - Capacitive type pressure gauge - Piezo resistive pressure sensor-Resonator pressure sensor - Measurement of vacuum: McLeod gauge, Thermal conductivity gauge, ionization gauges, Cold cathode type and hot cathode type – Pressure gauge selection, installation and calibration using dead weight tester – Pressure Transmitter: Conventional and Smart Transmitter, Level measurement using DPT.

PART A

Q.No	Question	COs	BT Level	Competence
1.	List the transducer used for measuring low pressure.	CO5	BTL 1	Remember
2.	Tabulate the difference between absolute pressure and gauge pressure.	CO5	BTL 2	Understand
3.	What are the various types of manometers?	CO5	BTL 2	Understand
4.	Draw the structure of U tube manometer and label its parts.	CO5	BTL 2	Understand
5.	Draw the structure of dead weight tester and label its parts.	CO5	BTL 2	Understand
6.	List the applications of piezo resistive pressure sensor.	CO5	BTL 1	Remember
7.	What is a dead weight tester?	CO5	BTL 1	Remember
8.	State the principle of McLeod gauge.	CO5	BTL 1	Remember
9.	Mention any three elastic type pressure gauges.	CO5	BTL 1	Remember
10.	Identify the equipment require to install a pressure gauge in a pipeline.	CO5	BTL 1	Remember
11.	Illustrate the working principle of thermal conductivity gauge.	CO5	BTL 2	Understand
12.	Give the relationship between pressure and its	CO5	BTL 2	Understand

	measuring devices.			
13.	Express the different units of pressure.	CO5	BTL 2	Understand
14.	Write the advantages and disadvantages of diaphragm type pressure gauge.	CO5	BTL 2	Understand
15.	Classify the types of Diaphragms.	CO5	BTL 2	Understand
16.	What do you infer from the limitations of McLeod gauge?	CO5	BTL 2	Understand
17.	Classify the pressure based on the type of measurement.	CO5	BTL 2	Understand
18.	Categorize the different application of dead weight tester.	CO5	BTL 2	Understand
19.	Compare the materials used for Diaphragm design.	CO5	BTL 2	Understand
20.	How is differential pressure measured in multiple fluid column?	CO5	BTL 1	Remember
21.	Assess the working principle of capacitive transducer for pressure measurement.	CO5	BTL 1	Remember
22.	Why elastic element type gauges are recommended and preferred to liquid column manometers in industry?	CO5	BTL 1	Remember
23.	Develop an arrangement used for calibration of pressure gauge	CO5	BTL 1	Remember
24.	Formulate the expression for pressure in hot cathode type ionization gauge.	CO5	BTL 1	Remember
PART B				
1.	Describe the methods of measurement of pressure using thermal conductivity gauges and ionization gauge. (16)	CO5	BTL 3	Apply
2.	Describe the pressure measurement process using the following: (i) Bourdon tubes (6) (ii) Bellows (5) (iii) Diaphragms (5)	CO5	BTL 3	Apply
3.	With neat sketch describe the method of measurement differential pressure using Capacitive differential pressure sensor. Mention its advantages and disadvantages. (16)	CO5	BTL 4	Analyze
4.	Describe the methods of pressure measurement using resistive type pressure transducers. (16)	CO5	BTL 3	Apply
5.	Describe the methods of pressure measurement using pirani gauge. (16)	CO5	BTL 3	Apply
6.	What are the different types of electrical pressure transducers commonly used in industries? Discuss. (16)	CO5	BTL 3	Apply
7.	Describe with a neat sketch, the construction and working principles of U tube manometer with and without large seal pots used for pressure measurement (16)	CO5	BTL 3	Apply
8.	Describe with a neat sketch, the construction and working	CO5	BTL 4	Analyze

	principles of well type manometer and enlarged leg type manometer used for pressure measurement. (16)			
9.	(i) Classify the pressure transducer based on range of measurement and type of measurement. (8) (ii) Explain with a neat sketch, the construction and working principles of inclined type manometer used for pressure measurement. (8)	CO5	BTL 5	Evaluate
10.	Illustrate, the pressure measurement method by using the Capacitance Pressure Transducer with neat diagram. (16)	CO5	BTL 3	Apply
11.	Explain the pressure measurement method by using the Potentiometric Pressure Transducer with neat diagram. (16)	CO5	BTL 4	Analyze
12.	Demonstrate how a Dead weight tester is used to calibrate Pressure measuring device and mention the factors affecting the accuracy of Dead weight Tester. (16)	CO5	BTL 3	Apply
13.	(i) What is meant by pressure? Write short notes on its classification based on Reference pressure. (8) (ii) Outline the working cold cathode type ionization gauge. (8)	CO5	BTL 4	Analyze
14.	(i) How LVDT is used for process pressure measurement? Explain. (8) (ii) A pressure gauge in the range of 0 to 100kg/cm ² is to be calibrated with the help of Deadweight tester. Calibration is used to be checked in the steps of 10kg/cm ² . Recommend the standard weights required if the average area of piston and cylinder is 1cm ² . Assume that the friction and other effects are negligible. (8)	CO5	BTL 4	Analyze
15.	Describe the working of all types of bourdon tube pressure gauges with a neat schematic. (16)	CO5	BTL 3	Apply
16.	Explain how McLeod gauge used for low pressure measurement. Justify this with your answer. (16)	CO5	BTL 4	Analyze
17.	Propose a setup to measure vacuum pressure. Explain the mechanism behind it. (16)	CO5	BTL 4	Analyze
